

Abstract of the Disclosure

Disclosed is a television that includes a memory storage device into which is stored one or more still photographs in digital form. The invention enables a television to include a feature that allows a user to change the television display to show a still photograph for an extended period of time in lieu of a television program or movie. In one version of the invention, the television includes a connector that allows a still photograph to be downloaded into a memory chip installed within the television. In a second version of the invention, the television includes a receiver for a removable memory device, such as a floppy disk or a flash memory chip. The removable memory device includes a still photograph, in digital form, that can then be accessed by the television and displayed on the television's screen.
